

Community Builder Plugin

The following defines the future feature roadmap for GMapsPRO.

As we have daily jobs and have limited time, all dates are tentative and subject to change without notice. Version 1.6 - January 2008

- Change the method of calculating "nearby users" to be SQL based versus PHP based to help with potential performance issues
- Version 1.7 - TBD
- Modify code base to retrieve plugin configuration parameters from GMapsPRO (prevent users from having to re-enter configuration parameters after an update)

Outstanding Features:

The following are features that are planned but have yet to be assigned to a specific release.

- Render the "self" icon with an icon different from the nearby users icons
- Formalize "hack" posted on the forums for CRON based batch calculation of nearby users
